Contract Supplement Packaging

In 1997, CSP focused on single serve delivery systems, packaging solely vitamin/supplement packets with multi-product fill. We quickly grew from one 3up Omag V/F/F/S line capable of 3 million packets per month to 3 Omag lines capable of 10 million packets per month. With this explosive growth, a commitment to a new facility was made in 1999. The design was driven by our desire to acquire a FDA registration of drug establishment and receive a labeler code assignment for the packaging of OTC products. This aggressive program was completed in June 2001.

Given the world events and a decline in our customers' base sales, we restructured our products and services. Our first addition was a new DL Tech bottling line with a dual purpose feed design. This investment allowed CSP to operate seven days a week and expand our customer base locally in Boise, ID.

With the addition of some new ownership in 2002 and a desire to grow the business, we offered a package that would allow us to provide innovative products to our customers and prospective clients. The design...STICK PACKS. We acquired two single lane machines and showed our customer base this new package, nine months later; we acquired two more single lane machines. In Fall 2005 our efforts to expand our business from the natural products/supplement industry, we ordered an eight up Duma stick machine with output capability of supporting mainstream food and drink products. This unit started production in March 2006 and a second machine has been ordered.

Thank you to all of our customers for choosing CSP to support their packaging needs. With our commitment to stick packs, we look forward to any and all new customers requiring a contract packager that is dedicated to the continuous evolution of the packaging world.
